

## From the Dean's Desk

As described in our last “From the Dean’s Desk” newsletter [\[view link\]](#), Sy Syms faculty are not only having a major impact on Knowledge Dissemination (through the classroom) but also on Knowledge Creation (through their research).

The last newsletter focused on new faculty research in Artificial Intelligence and Decision Making. In this newsletter, we profile six new papers that enrich our knowledge of finance, real estate and supply chains.

Kudos to all of these faculty for their contributions of both “Chiddushim” (new insights) and “Chinuch” (teaching)!

Noam Wasserman  
Dean

"Innovation under Ambiguity and Risk," Dr. Avri Ravid (Sy Syms), Dr. Gabriela Coiculescu (Sy Syms) and Dr. Yehuda Izhakian

research reveals that liquidity risk significantly impacts price spreads in the market. This method, the first of its kind, provides valuable insights into CMBX price formation and can predict market behavior up to twenty days in advance.
